HexaFlex-Blue Couplings. For a quiet marine driveline.

- Mounts on the output side between gearbox and shaft
- Reduces vibrations in the body of the boat
- Extends the life of surrounding drivetrain components
- Standard solutions for ZF- und YANMAR gearboxes
- Customized solutions on request

Advantages:

- Transfer of high torque with a small coupling size
- No additional adapters necessary
- Eliminates axial and radial misalignments
- Cord inlays in the coupling eliminate axial forces generated by the transmission of torque
- Customized hole patterns can be made upon request
- Easy mounting without moving the gearbox or propeller shaft
- Made of stainless steel
- Suitable for aluminium boats
- Long life and absolutely maintenance free
